

Product Discontinuation Notice

CSS Heating System

HOTSTART will no longer offer replacement parts or product support for the CSS line of circulating heating systems. The CSS product line was discontinued and replaced with the CSM model in 2009. As of September 2013, CSS replacement parts will no longer be available.

Recommendations

HOTSTART is recommending customers replace their current CSS system with CSM HOTflow™ heating systems which were developed to supercede the CSS. The CSM HOTflow™ heating system is a complete coolant preheater with thermostat, pump and all required controls. The CSM model heats engines ranging in size from 15L-100L displacement and is available with all standard voltages with heat output of 3, 6, 9 and 12kW.

CSM features:

- Common replacement parts with other HOTSTART models
- Smaller footprint
- UL-C/US listed
- Simple to install
